

Week 6

① Topics to be covered → App Engine.

② App Engine

→ We have already discussed 2 of engines in GCloud
Kubernetes & Compute Engine.

→ If you don't want to do anything with Platform (or) Java
just give the code to App Engine & it does the rest
of the things.

→ Has everything NOSQL DB, health checks, load balancing, caching
& Auto scaling. etc.

③ Two types

- App Engine Standard [code run in sandbox
(less time to start)].
- App Engine Flexible (more time needed)

④ Similar to Amazon Elastic Beanstalk.

⑤ Cloud Endpoints & Apigee Edge → GCloud to manage APIs.

End of week 6.
